EXPERIENCE

AI Infotech Private Limited | Product Owner

Chennai | Present

Gathered and analyzed business requirements from cross-functional stakeholders (Product, Engineering, UX, QA).

Facilitated requirement elicitation workshops and stakeholder discussions to define product vision, business goals, and feature scope.

Authored comprehensive Product Requirement Documents (PRDs), Functional Requirement Specifications (FRS), user stories, use cases, and acceptance criteria for Development and QA teams.

Managed and prioritized product backlog using Agile (Scrum), resulting in [add metric: e.g., X% faster delivery or Y prioritized features released].

Collaborated with Scrum Masters and development teams during Sprint Planning, Backlog Refinement, Sprint Reviews, and Retrospectives.

Worked closely with UX designers to validate wireframes, workflows, and user experience before development.

Performed requirement analysis, impact analysis, and gap analysis for new features and product enhancements.

Coordinated with QA teams during User Acceptance Testing (UAT), defect triaging, regression testing, and release validation.

Monitored feature delivery, tracked project milestones, and ensured timely release of product enhancements.

Defined API requirements and data flows for telematics/fleet management products; collaborated with engineers on API contracts and data schemas.
